

ABSTRACT OF THE INVENTION

2 An integrated control system comprises one or more controllers each equipped to
3 perform a control function and to gather data (ordinarily from sensors) relevant to the
4 control function. The data is combined with instructions, associated with the data, for
5 causing a remote computer to generate a visual display incorporating the data in a
6 predetermined format. A communication module establishes contact and facilitates data
7 interchange with the remote computer over the World Wide Web.
